Live Well Kent Quarterly Reports

Explanatory notes

- Quintile 1 is the highest level of deprivation, and 5 the least deprived
- Pathway is the term used for the different types of support/services that individuals access.
- CMI means common mental illness
- SMI means severe mental illness
- Sign ups means when someone uses a service.
- Improved wellbeing is measured for sign ups who have been in receipt of a service for at least two weeks. Those using the service complete a self-assessed questionnaire at the start of the service and then at the end, as far as possible. The difference in their score pre and post service provides a measure of change in their well-being. The scale used is the validated Short Warwick-Edinburgh Mental Well-being Scale (SWEMWBS).
